

Jay Pokharna

Pune, India | pokharnajay@gmail.com | 9420187289

Profile

AI & Automation Engineer with over a year of experience in designing and developing advanced AI solutions that drive efficiency and enhance decision-making. Proficient in integrating **large language models, vector databases, and APIs** to create scalable **AI-driven platforms, RAG-based systems and intelligent voice assistants**. Committed to leveraging state-of-the-art technologies to tackle complex business challenges and deliver impactful results. Expertise in **Python and cutting-edge machine learning frameworks** ensures a robust approach to automation. Ready to contribute innovative solutions that transform organizational capabilities.

Professional Experience

AI & Automation Engineer, Etherwise, Remote

November 2024 — Present

Full Stack Developer, Etherwise, Remote

May 2024 — November 2024

<https://etherwise.io/>

Full Stack Developer, Micro 1, Remote

March 2024 — July 2024

Freelancing(Website Development), Arihant Sales Corporation

November 2022 — January 2023

<https://arihantsalescorp.co.in/>

Internship, Transtech Solutions, Ahmednagar

April 2020 — July 2020

- Created a Government National ID CRUD desktop application. Implemented best software development practices to improve the efficiency of storage and retrieval process.

Freelancing(Website Development), Bhakti Builders

June 2019 — July 2019

<https://www.bhaktigroup.co.in/>

Personal Projects

RAG AI (On-Going)

February 2025 — Present

- Designed and implemented a Retrieval-Augmented Generation (RAG) system to enhance large language model responses with real-time, domain-specific knowledge.
- Built custom pipelines for document ingestion, vector embeddings, and semantic search to ensure high-accuracy information retrieval.
- Integrated the solution with [tools/stack you used: e.g., LangChain, Pinecone, FAISS, OpenAI APIs] for scalable and efficient query processing.
- Optimized retrieval and generation workflows, reducing response latency and improving contextual accuracy for end-users.

AI Avatar Interaction Platform

July 2025 — August 2025

- Built an interactive platform where students engage with AI avatars trained on personal academic and extracurricular data.
- Implemented real-time video avatar streaming with natural, conversational interaction flows.
- Enhanced personalization by integrating structured knowledge bases tailored to each student profile.

AI Voice Assistant Solutions

March 2025 — May 2025

- Built a gallery of six interactive voice assistant UIs with distinct layouts, behaviors, and branding using React, Framer Motion, and GSAP.
- Developed custom AI voice agents for health insurance sales, booking assistants, and large-scale outbound calling campaigns.
- Integrated Vapi.ai with Twilio, Google Sheets, and Make.com for workflow automation, real-time lead qualification, and warm transfer handling.
- Designed modular conversation states, custom controls, and retry logic to improve engagement, scalability, and conversion rates.

AI Stock Analyzer

January 2025 — February 2025

- Built an AI-powered WhatsApp integration to analyze stock chart images and provide trading insights.
- Combined computer vision for candlestick/pattern detection with real-time financial data via Google Search.
- Delivered summaries with pros/cons, one-liners, and actionable insights to end users instantly.

AI Marketing Deck Generator

November 2024 — December 2025

- Automated the transformation of discovery-call transcripts into structured JSON for a 27-slide marketing deck.
- Generated brand positioning, social media posts, and email drafts with strict schema validation.
- Improved content production speed and consistency for client-facing presentations.
